

Professor Ronald T. Gansevoort,

Department of Nephrology, University Medical Center Groningen (UMCG), the Netherlands

Prof. Gansevoort's work in the field of Chronic Kidney Disease (CKD) and Polycystic Kidney Disease (PKD) has been instrumental in the development of the novel KDIGO and WHO definition and classification of CKD, the development of novel endpoints for trials in the field of Nephrology and the first registered treatment for PKD. He is committed to getting more attention for screening for early CKD and prevention of CKD progression on a general population level, and specifically for prevention of disease progression in PKD. Ron has published over 550 peer reviewed manuscripts, and he is member of the steering committee of several large scale clinical trials. He has been awarded with several prizes and awards, including the US Kidney Foundation Distinguished International Medal. He serves as editor for 5 nephrological journals, and he is a Board Member of the European Renal Association.
